

# Noordoostpolder – the Netherlands – 2015

The Noordoostpolder Windfarm is located on shore and near shore along the dikes of the IJsselmeer on the western side of the Noordoostpolder. The 86 wind turbines of Enercon are the biggest at the moment to be placed on a concrete mast of 135 meters and blades of nearly 60 meters.

EXTREEMA® Heavy Lift (soft) slings were used to lift the fully assembled turbine & blades up to 150 meter height to be positioned in one lift. A tremendous cost saving operation improvement for ENERCON GmbH.

*“There are no limits in using quality products for safer lifting jobs”*
